# Current platform guide for Mergers and Acquisitions, IPO, public markets, and investor relations

Edition generated 2026-07-27 06:45 EEST

Document slug: liquidround-ai-platform-demo-20260727T034533Z

LiquidRound v0.5.0 · Predictive Labs Ltd · **liquidround.ai**

LiquidRound is a chat-first AI platform for transaction teams, public-markets analysts, and investor-relations professionals. It combines 26 specialist agents, guided tools, live market data, document workflows, and exportable work products in one workspace.

## Demo at a glance

Use this sequence for a concise platform demonstration:

1. Open the three-pane workspace and show automatic agent routing.
2. Run a company profile or deep-research prompt and open the resulting artifact.
3. Expand **Investor Relations** and create a researched press release.
4. Show the separate Press Release Analyst and Press Release Writer agents.
5. Export the drafted release to Markdown, Word, and PDF, then save it to the Data Room.
6. Open Public Markets, Deal Radar, Analytics, and the Skills editor.

The most important new workflow is **Investor Relations** → **Press Release Creator**. It turns a guided brief into a researched, publication-ready draft while keeping source notes and verification warnings visible to the editor.

## What changed from the previous guide

The prior guide no longer matched the running product. This edition corrects the following material differences:

| Previous guide                                                       | Actual platform reflected here                                         |
|----------------------------------------------------------------------|------------------------------------------------------------------------|
| Described 23 agents in Daily Radar and only one public-markets agent | Documents all 26 registered agents and four public-markets specialists |
| Called the prompt editor “Instructions”                              | Uses the canonical <b>Skills</b> name and /app/skills route            |
| Omitted SEC filing analysis                                          | Includes Filing Analyst and the SEC Filings workspace                  |
| Omitted press-release intelligence                                   | Includes the 390K+ release search and analysis workspace               |
| Had no investor-relations creation workflow                          | Features the guided, web-researched Press Release Creator              |
| Had no press-release drafting specialist                             | Includes the separate Press Release Writer agent                       |
| Did not describe release exports or saving                           | Covers Copy, Markdown, Word, PDF, and Data Room save                   |

| Previous guide                           | Actual platform reflected here                                                                                                           |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Public Markets navigation was incomplete | Covers IPO Map, IPO Pipeline, SPACs, Prospectus, SEC Filings, and Press Releases                                                         |
| Workspace naming and links were stale    | Aligns Companies, Pipelines, Deal Radar, Data Coverage, Valuation, Analytics, Data Room, Documents, Deal History, Skills, and User Guide |

## Getting started

Open **liquidround.ai** and choose a Buyer-Led or Seller-Led entry point. Sign in with email and password or Google to persist conversations, pipelines, documents, preferences, share links, bookmarks, and generated investor-relations drafts.

The primary application uses three panes:

- **Left pane:** sessions, 26 agents in six categories, Tools, Investor Relations, Public Markets, Hedge Funds, Workspace, Training, and Help.
- **Centre pane:** routed chat, guided workspace pages, forms, results, and controls.
- **Right pane:** news and agent artifacts such as tables, charts, citations, and PDFs.

On mobile, the left pane becomes a slide-in menu and the centre pane remains the main working surface.

## Investor Relations — featured workflow

### Press Release Creator

Open **Investor Relations** → **Press Release Creator** at `/app/investor-relations/press-release`.

Only **Topic** is required. The guided brief also supports:

- Company name or website
- Release type
- Language and tone
- Intended audience
- Key facts, dates, figures, and approved claims
- Quote guidance and speaker details
- Approved company boilerplate
- Investor and media contacts
- Length, embargo, exchange, and other instructions

Press **Research and draft release**. The workflow searches current web and semantic sources, sends the evidence and brief to the Press Release Writer, and returns editable

Markdown. Primary and official sources are preferred. When a material fact cannot be verified, the writer uses a confirmation placeholder or omits the claim.

## Draft structure and safeguards

The writer produces a news-led headline, optional subheadline, dateline, lead, supporting facts, attributed or clearly marked draft quotes, boilerplate, contacts, and source verification notes. It distinguishes completed events from plans and forward-looking statements. Regulated, earnings, fundraising, clinical, and Mergers and Acquisitions announcements are flagged for legal or compliance review.

## Release output actions

- **Copy** — copy the editable Markdown.
- **Markdown** — download a .md source file.
- **Word** — download a formatted .docx document.
- **PDF** — download a branded, paginated PDF.
- **Save to workspace** — save the draft to the signed-in user's Data Room.

## Two complementary press-release agents

The agents are deliberately separate:

- **Press Release Analyst** (`releases:`) searches and analyzes 390K+ releases from GlobeNewswire, PR Newswire, Euronext, Nasdaq Nordic/Baltic, and related feeds.
- **Press Release Writer** (`write-release:`) researches the live web and drafts a publication-ready investor-relations release from a topic and guided brief.

Demo prompts:

- `releases:` recent Mergers and Acquisitions announcements in the Nordics
- `write-release:` research Enefit Green and draft a release about a new solar project
- `write-release:` prepare a concise CEO appointment release for institutional investors

# The 26-agent squad

## Deal Sourcing and Screening — 4 agents

- **Target Scanner** (`scan:`) — find acquisition targets by sector, geography, and size.
- **Buyer Scanner** (`buyers:`) — map strategic and financial buyers.
- **Deal Triage** (`triage:`) — return a rapid go/no-go against an investment mandate.
- **Seller Intent Signal** (`intent:`) — rank companies by likelihood of entering a sale.

## Valuation and Underwriting — 6 agents

- **Company Profiler** (profile:) — build a live company and financial profile.
- **Transaction Comps Finder** (comps:) — find precedents and trading comparables.
- **LTM Financials Normalizer** (ltm:) — normalize P&L and EBITDA add-backs.
- **DCF Valuer** (dcf:) — create a five-year DCF and sensitivity analysis.
- **Multiples Valuer** (multi:) — apply peer and transaction multiples.
- **Synergy Analyst** (synergy:) — quantify revenue, cost, and operating synergies.

## Due Diligence — 5 agents

- **VDR Auditor** (vdr:) — audit a data room against a comprehensive checklist.
- **Contract Abstractor** (abstract:) — extract key terms with page references.
- **Legal and Regulatory Reviewer** (legal:) — flag litigation and consent risks.
- **Operational Diligence Reviewer** (ops:) — surface operational gaps and actions.
- **ESG and Compliance Risk Flagger** (esg:) — assess environmental, social, and governance risks.

## Deal Execution and Capital — 5 agents

- **IC Memo Writer** (memo:) — draft an investment-committee memo.
- **Teaser and CIM Designer** (teaser:) — create buyer-ready sell-side materials.
- **Bid Strategist** (bid:) — structure cash, stock, escrow, earnouts, and terms.
- **IPO Readiness Assessor** (ipo:) — assess financial, governance, operating, and market readiness.
- **Match Scorer** (score:) — score buyer-target fit across seven dimensions.

## Research and Post-Deal — 2 agents

- **Deep Research Analyst** (research:) — combine web and semantic research with citations.
- **Integration and 100-Day Planner** (integrate:) — create day-one and 30-60-90-day plans.

## Public Markets and Investor Relations — 4 agents

- **Hedge Fund Analyst** (hedgefunds:) — analyze 13F holdings, AUM, concentration, and activist filings.
- **Filing Analyst** (filings:) — search and analyze EDGAR filings including 10-K, 10-Q, 8-K, proxy, and XBRL.
- **Press Release Analyst** (releases:) — search, read, and aggregate historical releases.
- **Press Release Writer** (write-release:) — research and draft investor-relations releases.

## Chat, routing, and artifacts

Ask a natural-language question or start with an agent prefix. Explicit prefixes take priority; otherwise the router uses intent hints and a classifier. Agent progress and tool calls stream into the conversation.

Artifacts produced in the right pane include company profiles, result tables, citations, scoring matrices, charts, and memo/PDF previews. Use **Copy** to copy the conversation and **Share** to create a read-only session link.

## Public Markets

### IPO Map and IPO Pipeline

The IPO Map shows recent listings sized by market capitalization and colored by performance. Filters cover geography, exchange, sector, and other attributes. The IPO Pipeline tracks private candidates and upcoming calendar entries.

### Prospectus Builder

Choose uploaded PDF, XLSX, or PPTX materials, extract prospectus sections with AI, edit the fields, and generate a formatted PDF.

### SPAC Tracker

Track searching, announced, completed, and liquidated SPACs. Review trust values, redemptions, lifecycle charts, prices, targets, and institutional holders.

### SEC Filings

Search EDGAR filings, inspect filings and XBRL data, ask the Filing Analyst questions, and export the workspace overview to PDF.

### Press Release Intelligence

Search releases by keyword, ticker, event type, and look-back period. Read full items, review predicted market direction when available, run aggregate analysis, and export the release view to PDF.

## Hedge Fund Intelligence

The Fund Treemap visualizes SEC Form 13F positions by portfolio value. Search managers, set minimum position sizes, adjust result limits, and bookmark funds. Chat shortcuts surface top holdings, popular securities, portfolio concentration, and Schedule 13D/13G activist activity.

## Free public tools

The public Tools menu provides three no-sign-in workflows:

- **Market Comparables** — scrape a company site and benchmark relevant transaction multiples.
- **Find Buyers** — identify and score strategic and financial buyers.
- **Business Valuation** — combine financial inputs with sector multiples and value drivers.

Financial fields accept shorthand such as 1M, 500k, and 2.5B.

## Workspace

### Companies and company profiles

Search company data by name, sector, and geography. Open detailed profiles, financials, deal briefs, and company-level CSV/PDF exports.

### Pipelines

Maintain target and buyer pipelines, add items, and move them between stages.

### Deal Radar, Methodology, and Data Coverage

Deal Radar ranks buyer-target synergy pairs and target opportunities. Methodology documents the weighted scoring model. Data Coverage reports country coverage and supports manual synchronization of Estonian, Norwegian, and Danish company sources.

### Valuation

Use EV/Revenue, EV/EBITDA, DCF, and combined valuation views with adjustable assumptions.

### Analytics

Ask database questions in plain language and receive tables and charts. Export analytics documentation to PDF.

### Data Room and Documents

Upload, download, organize, and remove PDF, DOCX, XLSX, PPTX, CSV, image, and text files. The document agents can parse content, extract terms, and use workspace documents in analysis. Investor Relations drafts saved from the Press Release Creator appear here.

### Deal History and Daily Deals

Review prior workflows and status charts. Generate, send, preview, and export Daily Deals digests that combine company scans, synergy pairs, public-market intelligence, and a deep dive.

# Skills

Open **Workspace** → **Skills** at /app/skills to review and edit the operating skill for each registered agent. The editor supports WYSIWYG and Markdown modes, version history, and reverting. Saved changes clear the agent cache and take effect immediately.

The legacy /app/instructions address permanently redirects to Skills.

Investor Relations is represented by the prominently listed **Press Release Writer** skill, containing research rules, release structure, factual safeguards, tone requirements, and compliance-review guidance.

## Exports and generated documents

LiquidRound supports:

- XLSX exports for structured tables
- DOCX exports for Markdown-based documents
- Branded PDF exports across workspace pages
- CSV and PDF company exports
- Press-release Markdown, Word, and PDF downloads
- In-pane PDF previews for supported work products

Generated documents should be reviewed by the responsible transaction, legal, compliance, or investor-relations owner before external use.

## Account and configuration

Profile settings cover account details, password, preferred currency, buyer/seller role, deal preferences, and digest notifications. Supported working currencies include EUR, GBP, and USD.

## Training and help

**Deal Street** provides scenario-based training. Help includes Profile/Account, this User Guide, Scoring Methodology, and agent shortcut references.

Keyboard controls:

- **Enter** — send a chat message.
- **Shift+Enter** — insert a new line.

# Demo checklist

- Confirm the user is signed in before demonstrating persistence or Data Room save.
- Start with the Investor Relations creator and use a real, researchable company topic.
- Review source notes and verification placeholders before presenting the draft as final.
- Export the same draft to Markdown, Word, and PDF.
- Save the draft and open it from the Data Room.
- Contrast releases : historical intelligence with write-release : creation.
- Show Skills and open the Press Release Writer skill.
- Finish with a public-markets page and an agent-produced artifact.

# Document control

This document was generated from the platform state inspected on **2026-07-27**.

Prior guide editions are stored under docs/archive/. The repeatable regenerate-liquidround-demo skill archives prior outputs, audits current routes and agents, refreshes this source guide, and produces timestamped Markdown and PDF editions.
